ALERT: „Failure predicted” Are you prepared?

Protect your company against data loss

Is it possible to express the financial value of the stored information on the computers and servers in your company? What would happen if one day that data would not be available?

Disaster. Loss of information, loss of profit, loss of production, cost of recovery The average loss is approximately \$4000 per event (*)

Did you know that data loss caused by hardware failure occurs 7 times more often than data loss caused by computer viruses? (*) Companies use anti-virus software but only few see the benefits of protection against data loss caused by such failures.

Of course it is possible to **prevent** this and make sure the information is always safe and available. This is exactly the purpose of **Hard Disk Sentinel Enterprise** software.

Hard Disk Sentinel Enterprise is the ideal solution for companies and organizations managing sensitive information. It offers real-time protection against data loss by verifying the actual status of the storage devices attached to the computers and providing overall system status information, reports and alerts upon problems or issues.

Hard Disk Sentinel Enterprise both saves time and money for your company, help the work of IT administrators and allows enough time to prepare for problems before they turn to failures. This gives the possibility to replace problematic devices (by preventative maintenance) and minimise downtime.

Hard Disk Sentinel Enterprise incorporates Hard Disk Sentinel Professional and a special central management tool (the Enterprise Server) which enables remote monitoring of the clients over the network of any size.

Do not risk data loss, select the highest data protection solution available!

Free, fully functional demo is available upon request.

Detect Hard Drive Issues Before Catastrophe Strikes

The work that you do on your computer is extremely important, so why leave potential hard drive issues up to fate? By the time the system starts behaving strangely or making odd noises, it may be too late to save your data! With **Hard Disk Sentinel Professional**, you'll always have a complete overview of your hard drive's health, so you can spot potential problems before they result in an irrecoverable data catastrophe.

Hard Disk Sentinel Professional is your key to identifying, monitoring, testing, diagnosing, and repairing hard drive problems, even with Solid State Drives. With **Hard Disk Sentinel Professional**, you can instantly see reports detailing the total health of your drive, including temperature, self-monitoring (S.M.A.R.T.) data, transfer speeds, and more. Any deviation in these factors could be an early warning sign of impending drive failure!

Hard Disk Sentinel Professional also works on hard disks and SSDs that are being used in external USB or e-SATA enclosures and works with RAID controllers.

If your data is important, you owe it to yourself to order a copy today!

Boasting the most sensitive disk health rating system ever, **Hard Disk Sentinel Professional** will let you know about potential issues far sooner than any other program on the market today. You even enjoy the benefit of having automatic and scheduled disk backup options, which can work quickly to preserve your valuable bytes.

No need to use separate tools to verify internal hard disks, external hard disks, SSDs, RAID arrays as these are all included in a single software: the award-winning Hard Disk Sentinel Professional.

Key features of Hard Disk Sentinel Professional and Enterprise version:

- Real time hard disk drive (HDD) and solid state disk (SSD) status monitoring
- Diagnose hard disk issues (health, temperature or performance)
- Hard disk tests to reveal and repair (fix) HDD problems
- Alerts to predict and avoid HDD failure
- Scheduled and automatic (on-problem) backup functions
- Remote monitoring, advanced hard disk control and management features
- General system information and status
- Free life-of-product technical support and help
- Lifetime license - no renewal or subscription costs, lifetime free upgrades to new versions

Feedbacks & opinions received from users:

Hard Disk Sentinel is really well-done and meet all the demands concerning HDDs and SSDs. Many HDD utilities are inconvenient and half-done; I've been happy to find the differ one.

Ilya Zaidel, editor 3DNews.ru

Having used / played around on Windows XP Pro with the one copy of HD Sentinel Pro which I registered a few days ago, I am very impressed by its capabilities (eg. USB hard disk monitoring) and stability by reference to other similar software which I have used in recent years.

Ian de Sousa

I just wanted to express my complete satisfaction about HD Sentinel. I installed it about 2 weeks ago and I am very pleased with the results. It has helped me make cooling modifications to my PC that I hope will extend the life of my HDs and PC components in general. I have recommended your software product to several of my friends and colleagues. Well done!

Paul Kruse

Hard Disk Sentinel Enterprise is the perfect tool to monitor our IT environment in the network. It helped us to find out possible issues and we had the opportunity to replace disks and modify the configurations to prevent data loss.
