

In every network
the right settings
for your laptop

NetSetMan Pro is a Windows software tool used for managing the network and system settings of your laptops in profiles between which you can switch quickly and effortlessly any time.

TIME-SAVING

You will never have to manually adjust your laptop settings again when switching between different locations. The automation of routine tasks provides the opportunity to concentrate on the essential.

Upon arrival in the office, NetSetMan Pro adjusts the required IP settings, configures the proxy, changes the standard printer and connects the necessary network drives. Automatically and optionally completely in the background.

ORGANIZING

Different configurations no longer have to be written down or remembered. Forgotten, mixed up or wrongly configured settings now are a thing of the past.

Every location, customer and objective is assigned its own profile in which the specific settings are saved in a clearly arranged overview. Profiles can be simply shared if a colleague needs the same settings later on.

PROBLEM-SOLVING

Thanks to NetSetMan Pro, users are able to solve network problems without any IT support. All settings can be configured to the same functional level any time by activating a company profile.

Profiles with default company settings are implemented during installation and protected against accidental changes. In addition, users can create additional profiles as needed.

"Being a government contractor we work on enterprise size networks every day. Whether it's configuring new devices set with default IPs or troubleshooting any of the hundreds of devices in the field, we are constantly having to change our laptops to match the network or device we are working on. I spent weeks testing and looking for software that could automatically do this for us and then I found NetSetMan Pro. This is exactly what we were looking for and every other software I tested was light years away."

Myles McNamara,
Project Manager
TRANSCORE
Orlando, FL, USA

The saved work time amortizes the low-priced license (19€ - 29€ per device excl. VAT) after using for only a few days. The one-time cost includes free updates within the purchased major version.
