

Cascaded Lookup: Look up Cross-site Information Quickly by Building Parent-child Filter Function

With SharePoint "Out of the Box":

- Cannot look up cross-site information
- Cannot filter information

What Do I Want?

- Getting information from different sites within a site collection
- Applying a combination of filters to find the information I need quickly and precisely

With Cascaded Lookup, it is now possible!!!

Cascaded Lookup Main Features:

Cascaded Lookup Features	Cascaded Lookup	SharePoint
Look up information from any SharePoint site in a site collection	✓	✗
Build parent-child relationships between columns in the same list so that data entered in one field filters the options presented in another	✓	✗
Use a combination of filter parameters from the source list and the target list to filter the items presented in a lookup field	✓	✗
Convert between the default SharePoint Lookup column, Cross-Site Lookup column, and Cascaded Lookup column, and at the same time save Cascaded Lookup settings	✓	✗
Filter lookup items by view	✓	✗
After conducting a search, the complete column information belonging to the element will be shown	✓	✗
