

Password Change & Expiration: Changing Password and Notifying Expiration

With SharePoint "Out of the Box":

- Users cannot change their passwords by themselves
- Cannot send "Password Expiry" notification to users

What Do I Want?

- Letting SharePoint users know the reason why their password change failed, e.g. password expired, password not complex enough, etc
- Getting "Password Expiry" notifications early in order to avoid log-in failure

With Password Change, it is now possible!!!

Password Change Main Features:

| Password Change Features | Password Change | SharePoint |
|--|-----------------|------------|
| Change AD or Local NT passwords without administrator intervention | ✓ | ✗ |
| Support Forms Authentication users to change passwords | ✓ | ✗ |
